

bpj/vim-keymap/keymap/bpjlatin.vim as of Thu May 12 15:07:13 2016

```
" vim: set noet ts=24 sts=24 ro list:
"
" Note: Don't take the unicode names next to letters too seriously.
"       Case is often off in them because I've 'inflated' upper- and titlecase
"       programmatically.
"
" CHANGES:
"
" Changed: 24 March 2016
"   Added versions of multi-character ngraphs without the '# @ &' prefixes to
"   see how using the '""' prefix fares in disambiguating.
"   I forked the keymap in so doing because I want the old version to be
"   available in parallel.
" Changed: 16 January 2016
"   Added '""--' for em dash
" Changed: 21 November 2015
"   Clarified change note from 8 October 2015.
"   Added some comments as 'section headings'
" Changed: 3 November 2015
"   Added Latin Beta and Latin Chi as $B $b $K $k
"       Most of these chars are brand new in Unicode 8.0.0
"       For now Everson Mono or Unifont must be used to display, Quivira to
"       print proportionally.
"   Added Greek Phi Theta Gamma Delta as $F $f $T $t $G $g $D $d
"
" Important: change 8 October 2015
"   I have found the device with curly brackets for n-graphs nnoying so I have
"   replaced it with a system with different sigils depending on the number of
"   characters in the n-graph:
"
"       '#'      for tetragraphs   ('#' + 4 characters)
"       '@'      for trigraphs    ('@' + 3 characters)
"       '&'      for digraphs     ('&' + 2 characters)
"       '$'      for monographs   ('$' + 1 character, effectively a special digraph)
"       '""'     plus any literal ASCII character for that character as before:
"           '""' -> '""'
"           '""# -> '# '
"           '""@ -> '@ '
"           '""& -> '& '
"           '""a -> 'a '
"           etc.
"
"   There is currently only one $-graph: '$$' for long s, but I plan to replace
"   some &-graphs with $-graphs as occasion arises.
```

” (Note 2015-11-21: some were added 2015-11-3. Further additions/changes
 ” will not be added here. Read the change log!)
 ”
 ” Note that these four characters may occur as non-sigil characters in a prefixed n-graph.
 ” As yet only ‘@’ for ‘loop’ and ‘\$’ for long s actually do.
 ”
 ” Non-decomposing letters with overstruck diacritics like ‘l’ are now treated as digraphs: ‘
 ”
 ” ‘#’ was formerly unused. It is not yet used other than as a prefix
 ”
 ” ‘&’ and ‘@’ were formerly used for ring above and ring below. These are now ‘^’
 ” and ‘%’
 ”
 ” ‘%’ was formerly oblique stroke. It is now ‘+’ except in digraphs like ‘&l’
 ” for ‘l’ where it is simply ‘/’
 ”
 ” ‘\$’ was formerly used for long s only. That is now ‘\$\$’ ‘&\$.’ ‘&\$t’ etc.
 ”
 ” ‘+’ is now officially used for ‘overstrike’ like ‘^’ is used for ‘above’ and ‘_’
 ” is used for ‘below’. OTOH I have removed ‘+’ in prefixed n-graphs like ‘&l’
 ”
 ” Curly brackets are now unused. This frees them for markup use.
 ” I do believe that e.g. {**foo**} is more readable as markup than *”foo”*
 ” This really only affects keymaps as transliterator config, not actual
 ” keymaps!
 ”
 ” I actually made those changes a while ago but didn’t commit them. I now
 ” backed-up, reset, branched and reinstated them.
 ”
 ” I promise to get better at documenting even small changes!
 ”
 ” TODO:
 ” Have (alternative) unprefixd letter+letter digraphs, since there
 ” always is ‘”’ + letter to get the vanilla ASCII letter?
 ”
 ” Use ‘j’ for ‘turned’? Does iPhone English keyboard support it?
 ” It is an alternative now, but I want to get rid of double-backtick 3- and 4-graphs!
 ”
 ” In fact I want to get rid of backtick entirely to make it easier to
 ” use transliteration modules with Pandoc filters and ‘code’.
 ”
 ” Use ‘*’ for something? I have hitherto not used it to make it easier to
 ” enter Markdown, but then I use ‘.’ and ‘,’ for example.
 ”
 ” Make ‘{’ + punct and punct + ‘}’ generally mean punct unless otherwise
 ” defined? I suspect that should better be handled by a parser which

” actually *understands* balanced constructs.
 ” This really only affects keymaps as transliterator config, notas actual
 ” keymaps!
 ”

” Imortant: change 27 March 2014!

” Since the use of & to mark digraphs conflicted with the use of & for
 ” combining ring above I changed the notation of digraphs to use curly
 ” brackets around the digraph like &th for þ, rather than the earlier
 ” &th. It’s one char more to type, but it allows digraphs to be
 ” trigraphs! ;-)

```
scriptencoding      utf8
let                b:keymap_name      = "latin"
hi                lcursor            guibg=magenta guifg=magenta
loadkeymap
```

” Don’t remove this line!
 ”
