

bpj/vim-keymap/keymap/bpjtibetan.vim as of Thu Jun 25 17:49:33 2015

```
" vim: et tw=0 ts=40 sts=40

" ASCII to Unicode Tibetan
"
" N.B. that the ASCII mapping is *not* Wylie, except for the names in
" brackets. Notably:
"
"   Sanskrit letters:      T Th D Dh N S kS rI lI
"   Y R L W vs. y r l w:  Lowercase are the usual subjoined letters.
"                           Uppercase are the normal non-subjoined letters.
"                           The fixed-form subjoined letters are available
"                           as +Y +R +W.
"   ka/k/.k:              The ka/k alternatives are available for all letters
"                           both normal and subjoined letters (as +ka/+k),
"                           while the .k alternatives are available only for normal
"                           letters. (Use +ka/+k for subjoined.)
"   Wylie g.ya             Is thus typed g.Ya or gYa.
"   Subjoined letters:     All subjoined letters are available as +ka etc.
"                           so you can in theory build arbitrary stacks!
"                           The exception are:
"   Y R L W vs. y r l w:  Lowercase are the usual subjoined letters.
"                           Uppercase are the normal non-subjoined letters.
"                           The fixed-form subjoined letters are available
"                           as +Y +R +W.
"   ska, rka, lka etc.:   Standard Tibetan stacks are precomposed, so you just
"                           type sk Rk Lk, and thanks to the preceding entry
"                           ky, sky, kr, skr etc. work as you would expect too.
"   tza and tsa:          Instead of tsa and tsha!
"   A:                     Is the last letter of the alphabet.
"                           ASCII a is essentially a no-op used in
"                           alternative mappings like ka vs. k.
"                           N.B. you must type Ai Au Ae Ao for initial vowels!
"                           Maybe I'll add qa/q etcetera for the last letter.
"   I, E, O               Are inverted i, doubled e and doubled o respectively.
"   Ha vs. ha vs. ' :    Wylie ha is Ha etc. while Wylie 'a is ha etc.
"                           and ' (apostrophe) is subscript 'a ('a chung).
"                           Note that you should write k'u and not ku', and
"                           the u may not be visible in Vim.
"   Fixed-form ra:        Is "ra"/"r"/".r
"   Inverted ra (RRA):    Is "Ra"/"R"/".R
"   tseg and tseg bstar:  Are , and - respectively.
"   shad and nyis shad:   Are / and // respectively.
"   Other punctuation:    Have codes consisting of an abbreviation of their Unicode
"                           names in hyphenated Wylie, between angle brackets.
```

```

"                                Consult the mapping itself for the mappings!
"  Marks, signs, symbols:      Are mostly treated like 'other punctuation' for the time being
"                                Consult the mapping itself for the mappings!
"
" You probably want to use the Unifont font <http://unifoundry.com/>;
" it is ugly but AFAIK the only monowidth font which covers Tibetan
" and a number of other scripts! You also want 16 font size!
"
