" Vim keymap for inputting (Ancient) Greek through
" ASCII-Latin 'transliterations.
"
" Maintained by: Benct Philip Jonsson
" <bpj@melroch.se>
"
" My take on entering Unicode (Ancient
" [polytonic](http://en.wikipedia.org/wiki/Greek_diacritics))
" Greek. Unlike Beta Code 1:1 character correspondence is neither a
" requirement nor a goal. If you want to type **χώρη** you type
" 'kh/.or.e' -- or 'ch/.or.i' or anything in between if that suits
" your pronunciation or orthographic habits --, and if you want to
" write **ξηρά** you type 'x.er/a' or 'ks.er/a' or...
"
" So it's mainly a normal Latin-letter transcription with ASCII
" punctuation thrown in as diacritics, so that you normally type Greek
" words in such a way that if you remove those punctuation 'diacritics'
" you get a spelling which corresponds to the normal Latinized spelling of
" the Greek words. I can't even guesstimate the number of times I've
" mistyped **ξη** when I meant **χ** with a Beta Code mapping! (BTW what's
" up with 'c' and 'x' in Beta Code? Had they never heard of the
" [acrophonic principle](http://en.wikipedia.org/wiki/Acrophony)? So X
" looks like a cap **χ**? Maybe we shall be thankful they wrote BC Greek
" in 'ALLCAPS' or they would have used 'p' for **ρ**, 'n' for **π** and
" 'v' for **ν**, or wouldn't they?)
"
" All punctuation 'diacritics' go before the letter they modify, so that
" punctuation characters which normally only are used at the end of words
" can usually be typed normally! Conveniently rough breathing (spiritus
" asper) is 'h' or 'H'. Less conveniently smooth breathing (spiritus
" lenis) has to be entered explicitly as ', ', which was the best match I
" could find not wanting to use parentheses as diacritics; there is
" nothing you can do about it the way vim keymaps work.
"
" The input character sequences were choosen to suit me and my
" (Swedish) keyboard layout. If they don't suit you or your keyboard
" layout don't come complaining with me; instead rename the file
" and edit it to suit you!
"
" I have prepared the file to make it easy to use '~' instead of
" '<' for circumflex: just comment out all lines below the one
" where U+00BB RIGHT-POINTING DOUBLE ANGLE QUOTATION MARK is
" defined which contain '<' and uncomment all lines which contain
```

```

" '~' with the following regular expressions:
"
"      :.,$s/^\S*</" &/
"      :%s/^\s*(\S*\~\)/\1/
"
" Similarly you can use '_i' instead of ';i' for iota subscript by
" commenting lines with ';i' and uncommenting those with '_i':
"
"      :%s/^\S*;i/" &/
"      :%s/^\s*(\S*_\)/\1/
"
" The input key combinations for Greek characters consist of Latin
" letters, combinations of Latin letters or combinations of
" punctuation characters and Latin letters. The combinations have
" been chosen by these principles:
"
" 1. Similarity to the standard Latin transliteration of the
"    respective Greek letters and diacritics (the latter
"    concerning only the rough breathing.
" 2. Correspondence in meaning between Latin and Greek punctuation
"    marks (in the case of the Greek question mark and colon).
" 3. Visual similarity between Greek diacritics and ASCII
"    punctuation characters.
" 4. The fact that certain punctuation marks (notably '. , : ;'
"    are normally followed by whitespace and not by letters,
"    which makes them unambiguous as diacritics when they
"    precede letters.
" 5. Ease of typing on my Swedish keyboard; that's why I avoid
"    ';' which are both shifted characters on my keyboard.
"
" In practice this means that you basically type Greek words as you
" would transliterate them into Latin. To indicate diacritics above
" letters you type certain punctuation characters which are
" visually similar to the respective Greek diacritics before you
" type the letter, just as you hit deadkeys before letter keys to
" get letters with diacritics with the ordinary keyboard. This
" principle of preceding diacritic punctuation characters has been
" extended to where the same Latin letter corresponds to more than
" one Greek letter -- notably with eta and omega, but also with
" archaic and old-style letter forms. Some examples:
"
"      You type:      You get:
"      -----
"      th             θ
"      ha             á
"      ,a             ð

```

"	/a	á
"	\a	à
"	<a	â
"	h/a	ă
"	,/a	ǎ
"	h\a	â
"	e	ε
"	.e	η
"	,/e	
"	,/.e	
"
